- CD Rom

“Thanks to Safety4Business competitive pricing, the training cost per head is well below that of classroom training.”

HR Manager (H&S),
Southend Borough Council

Ensuring the health and safety of employees is one of the prime responsibilities of any organisation. Failing to do so represents a moral, ethical and commercial shortfall that can, and will, have disastrous results for both the organisation and the people who work for it.

The aim of health and safety management, therefore, is to turn uncontrolled hazards into controlled risks. This course will enable the learner to do this by using a cyclical process of problem identification, solution provision and ongoing evaluation.

Managers using this course will be able to understand and implement a health and safety management system containing standards, policy and processes designed to ensure a quality approach to health and safety in their organisation.

Course Content

- Why health and safety management is important
- Legal considerations
- The 5 stage framework:
 - Creating a health and safety policy
 - Creating a health and safety culture
 - Risk assessment, reduction and removal
 - Monitoring health and safety performance
 - Evaluating the results.
